

If you were utilizing the User Defined Field (UDF) functionality with the legacy MoJo Tools and you would like to re-use those UDF tables with Catapult Analytics Tools, just follow these quick steps to convert your files.

## >> step 1

Before you begin, you will need to have the Catapult Analytics Tools setup on your computer. If you already downloaded the Catapult Analytics Tools, please click [here](#).

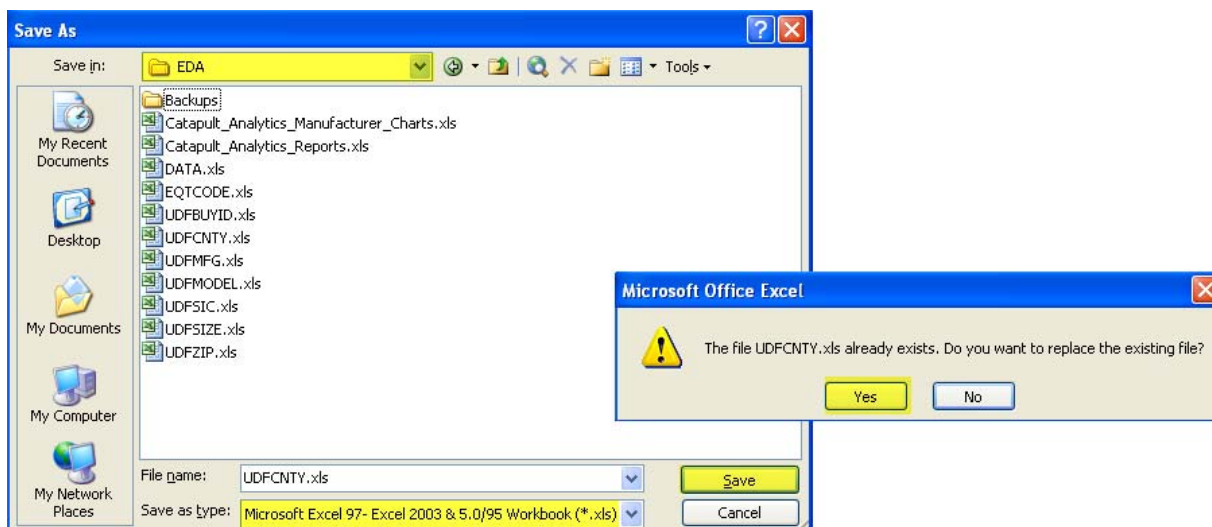

## >> step 2

Go to your C:\Rainmaker folder and Find and Open the existing UDF table you would like to re-use with Catapult Analytics. Note: You only need to perform this step for the UDF tables you want to re-use.

## >> step 3

Once the file is open, go to File > Save As. Save it in your C:\EDA folder and under the "Save as type" selection, choose Excel 97-2003 Workbook. When it asks you want to replace the existing xls file, choose "Yes". Note: If you are using Excel 2007, make sure to save it as an Excel 97-2003 workbook.

That's it. Simply repeat steps 2 and 3 for each of the UDF files you would like to re-use and your legacy MoJo UDF tables will now work with the Catapult Analytics Tools.
